PROFESSIONAL SUMMARY

Full-stack focused Computer Science undergraduate (graduating 2028) with a backend bias: shipping REST APIs in Node.js and Express against PostgreSQL, and designing normalized relational schemas with Prisma ORM. Hands-on with Docker Compose, REST API integration, input validation, and pull-request-based workflows. Currently building out frontend fundamentals alongside backend work, including React hooks and component internals, and seeking a full stack internship where frontend skills can be developed on real client projects.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, C, C++, TypeScript, HTML/CSS

Frontend: React.js (hooks and component internals; working knowledge), JavaScript, TypeScript, HTML5, CSS

Backend & APIs: Node.js, Express.js, REST API design, RESTful services, controller/service/repository layering, middleware, API error handling, input validation, API documentation

Databases & ORM: PostgreSQL, MySQL, Prisma ORM, relational schema design, normalization, SQL joins, query optimization, connection pooling

Tools & Platforms: Git, GitHub, Docker, Linux, Postman, Streamlit, Ollama, VS Code, NeonDB

Practices & Concepts: code review, debugging, technical documentation, requirements gathering, object-oriented design, Git workflow

PROJECTS

Lambda - Custom Reverse Proxy with Real-Time Traffic Analysis

TypeScript, Node.js, pnpm monorepo, Docker Compose, Redis | https://github.com/AlyKazani04/Lambda

- **Backend Engineering:** Built a custom network-layer reverse proxy with separate L7 and L4 protocol tracks, plus real-time packet capture and traffic analysis.
- **DevOps & Tooling:** Containerized a multi-service development environment with Docker Compose and managed state with Redis using capped, bounded-growth list operations.
- **Open-Source Workflow:** Worked in a pull-request workflow: opened 26 tracked issues and merged 4 feature PRs, documenting architecture decisions in the project README.

NoteStack - Full-Stack Note-Taking Web Application

Node.js, Express.js, React, TypeScript, Prisma ORM, PostgreSQL (Neon) | https://github.com/AlyKazani04/notes-fullstack

- **API Development:** Architected a full-stack CRUD application with a React single-page frontend and a RESTful Express.js backend API, delivering full create/read/update/delete functionality end to end.
- **Database Design:** Modeled relational schemas with Prisma ORM against a serverless Neon PostgreSQL instance, applying normalization and connection pooling for reliable concurrent access.
- **Backend Engineering:** Built standardized backend controller modules with defensive input validation, structured HTTP error boundaries, and unified response formats to keep failures consistent and debuggable.
- **Collaboration:** Versioned the project with Git and GitHub using feature-branch workflows and pull-request-based code review.

AI Resume Analyzer - LLM-Powered Screening Tool

Python, Streamlit, MySQL, Ollama, nomic-embed-text | https://github.com/AlyKazani04/AI-Resume-Analyzer

- **Application Development:** Built a full-stack web application using locally hosted LLMs (Ollama) for semantic resume-to-job-description matching and skills gap analysis via a Streamlit frontend.
- **Software Architecture:** Implemented a unidirectional layered architecture (UI -> service -> repository) with a normalized MySQL schema covering users, sessions, resumes, and analysis reports.

EDUCATION

B.S. Computer Science | FAST National University of Computer & Emerging Sciences, Karachi | 2024 - 2028 (Expected)
A-Levels (Computer Science) | Cedar College, Karachi | 2021 - 2023

ADDITIONAL

Clubs: PROCOM '25-'26, DevDay '26, GitHub Campus Society, FES
